

# Train the Trainer Resources

Building a Rock Paper Scissors Game using boolean logic

Complete the Project – Rock , Paper Scissors

```
on shake
  set weapon to pick random 0 to 2
  if (weapon = 0)
    then show leds
  else if (weapon = 1)
    then show leds
  else show leds
```

Test the code and download it to a micro:bit

## Topic 8

Games

Learning Objectives

Make simple games

Computing

Learn about using variables to store and retrieve data.

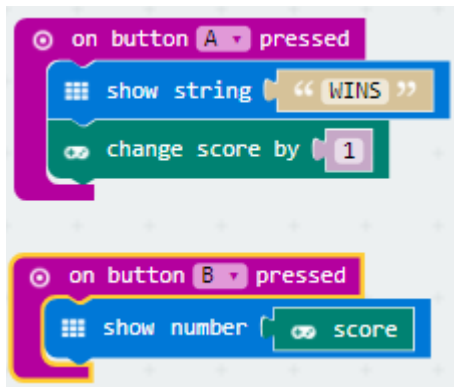

Learn methods that numerical data can be processed.

Use simple Boolean Operators

## Task

Extend the code by adding by adding a win counter

Button A adds 1 to a pre-prepared variable called Score.

This can be found in the Advanced > Games list in the toolbox.

Students Press A every time they win a RPS challenge.

Press Button B shows how many games have been won (or cheated at :-))

Creating games involves many complex interactions.

For this explore the following Hex files in the shared drive.

-  [microbit-8-1-simple-timer](#)
-  [microbit-8-2-reaction-game](#)
-  [microbit-8-3-tilt-reaction-game](#)

Experiment with the code and modify it to customise it and create a new version of the game.

## Topic 8

Games

### Practice Activity

Re-design Rock, Paper Scissors. Involve five elements e.g add paper clip and stapler
